New & Improved Learning Management System (LMS) from L3 Commercial Training Solutions (L3 CTS)

Courseware can be launched and tracked using the L3 CTS Learning Management System (LMS). The LMS is designed to provide administrators with the support to manage and track courses, modify student accounts, assign courses, view course progress and generate progress reports.

For students, the LMS provides login authentication, launching, and tracking of assigned courses. Distance learning validation exams are available to track student progress before arriving for on-site training.

User Administration

Manage Organization – allows administrators to create and modify the organizational hierarchy

Manage Users – allows administrators to add individual user accounts and import whole student rosters from a file

Content Assignment – allows administrators to assign content to selected list of users or organizational level

Progress Tracking – administrators can view and modify assignment eligibility period and progress for students

Content Management System (CMS)

Import Content – allows administrators to import SCORM based content

Content Structure – allows administrators to copy and edit existing content structure

Recurrent Training – existing content structure can be customized for recurrent training needs

Documents – user documents can be uploaded into content blocks

Bundling – content can be bundled into aggregate blocks for curriculum based training

Prerequisites – modify linear flow of training curriculums based on internal and external prerequisites

** Some LMS features are available dependent on your license agreement.*

Exam System

Question Bank – allows users to create exam subjects populated with categories and questions within categories

Exam Templates – allows users to create the assignable exams based on pre-created subjects and applying various grading criteria

Search Engine – allows users to search the question bank of subjects by keywords and in-place editing of selected components

Exams – randomly generated during the runtime when users/student take them online in the web browser or in OS specific client apps (ETHOS apps)

Statistical Data – includes the question bank's subjects, categories, and questions

Reporting System

Hierarchical Student List – allows administrators to generate the rosters of users based on the selected company or organizational level within that company

Student Course Progress – allows administrators to generate and export the comprehensive progress reports on selected users for selected content

Content Usage – allows administrator to generate reports based on selected content

Support Custom LMS Reports – based on the standard reports with saved report selectors

New LMS Features

- Exam System
- Content Management System (CMS)

New Student Portals

- Online – Web Browser
- Offline – Tablet and Windows
